

Built for Mac OS X

The Most Powerful Geospatial Analysis Products for the Newest Mac OS

- Native product for Mac OS X.
- One product integrates GIS, image analysis, CAD, desktop cartography, relational data-bases, surface modeling, and advanced geodata visualization.

- Available in 25 world languages.
- View any number of geodata layers of different types (raster, vector, CAD, TIN, GeoFormula, etc.).
- Apply visualization tools for zoom, pan, hide, view-in-view, data inspection, etc.
- Open any number of geolocked view windows in 2D and 3D.
- Create 3D landscapes for interactive flyovers with TNTsim3D.

- Use LegendView tools to manage multiple layers.
- Incorporate multiple GPS inputs for simultaneous live display.
- Create complex, large-format map layouts.
- A powerful geospatial editor lets you modify and update geodata of all kinds.
- Publish interactive atlas materials on the Internet with the optional TNTserver product.
- Develop your own custom modules and mini-applications with the Spatial Manipulation Language or with TNTsdk.
- Over 70 color tutorial and application booklets available for quick online reference.
- Download a free version (TNTlite) for unlimited testing: www.microimages.com.
